Afghanistan's terrified scientists predict huge research losses

For 20 years, science has blossomed in Afghanistan. Now many researchers are fleeing and those who remain face lost funding and the threat of persecution.

Nanotechnology makes biomass electrolysis more energy efficient than water electrolysis

ScienceDirect

Volume 1, 2014

The polymeric water-splitting membrane requires high electrical energy consumption. Authors report a new type of electrolyzer that, thanks to palladium-coated nanowires, oxidizes bio-ethanol, resulting in energy-convenient hydrogen production as well as valuable chemical by-products.
